How to photograph eyes with a
cellphone camera

A visual guide

Make the patient stand facing a light source. Stand about 6 inches away facing the patient.

Use diffused ambient lighting like from a window, and not a focused spotlight.

TO CLICK A **SINGLE** EYE:
Hold the phone parallel to the
eye at eye-level.

Open your phone camera.

Zoom to fit the eye in the centre of the frame.

Keep some margin around the eye in order to capture the
full eye.

Set camera-focus at the eye and click.

To click **3 different photos** of the **same eye**, make the patient:

(a) look **right** and click

(b) look **left** and click

(c) look **straight** and click

Repeat for the other eye.

CLICK A PHOTO OF
BOTH EYES TOGETHER

Open eyes fully and click.

Also click photo with eyes **looking up** and **looking down**
